PROFESSIONAL SUMMARY

Front-end Developer specializing in building web applications. During my educational period, I used technologies such as HTML5, CSS3, and JavaScript in personal projects to build high-performance and easy-to-use web applications. I understand modern frameworks React.js, Next.js, component concepts (Component, JSX), state management, and component lifecycles and interactions between components, which helps me develop interactive and fast user interfaces. I always seek to learn new technologies and apply best practices in development to build my programming skills and achieve outstanding results.

EDUCATION & COURSES

Take Courses And Training From Route Academy As a Front End (React js)

SKILLS AND TOOLS

- HTML
- CSS / CSS3
- Responsive Web Design
